

The solar system works again ...

The center of our shelter is the solar system. This operates all necessary equipment and especially the pump of the water tanks.

Since mid-June, the almost 20-year-old batteries had some dropouts, which piled up from day to day. A week ago then the final end. Nothing worked.

Faced with such a large issue, we were initially at a loss. Then came the idea of a cat friend who has been loyal to us for a long time: If you manage to attract 10 sponsors with 50 euros, then I will sponsor a special amount, so that the system can function again quickly. Said and done. Thanks to your quick help, the 10 sponsors came together within 2 days and we were able to have the replacement batteries delivered from the mainland.

Thanks to the generous donation of Mrs. R. from B. 🙏 and the other sponsors 🙏, 1/3 of the costs were quickly taken off our shoulders. We would be pleased if you can continue to support us with the remaining amount. Any sum is welcome!

From old ...

make new:
